USA Skypanels™ Announces the Release of its Newest Creation – The Jacaranda Tree

Children effected by autism and other disabilities have show improvement when placed in environments with Skypanels™ light diffusers.

North Hollywood, CA (February 3, 2009) – Educational and rehabilitation facilities across the nation have eagerly anticipated the release of USA Skypanels™ newest addition in decorative light diffusers – the Jacaranda Tree. This is the ninth design in Skypanels'™ already successful line of products.

Skypanels™ have been placed in many classrooms for children with special needs. Becky Smith, a special education teacher for Mobile County Schools in Alabama had four Skypanels™ installed in her classroom. Instead of looking up at the standard brittle plastic diffusers typical in classrooms, students worked under images of billowing clouds and palm trees. Smith noticed that children with behavioral issues such as oppositional defiance, autistic characteristics, and sensitivity to light and sound, appeared to calm down quicker once they were inside the classroom.

“The lights appear to increase focus and decrease distraction,” Kelly Kratzer, MA, IMFT, Certified Behavior Analyst stated. “They generate conversation for children with high-functioning autism and create a pleasant and creative play and work environment for the children.”

Skypanels™ capture the essence of nature while creating an illusion of being under real skies and other natural therapeutic settings. Skypanels™ are custom designed, decorative translucent panels, that fit into standard fluorescent ceiling fixtures and replace the dull, brittle, plastic stock diffusers found in most commercial offices, hospitals, schools, and homes. Skypanels™ have been attributed to reducing tension and headaches by providing relief from the harsh glare of traditional overhead diffuser lighting. By creating a feeling of being outdoors, Skypanels™ users sited elevated moods, feelings of calmness, as well as an increased overall sense of well being, as compared to those who worked under traditional light diffusers.

Used by thousands of customers nationwide, USA Skypanels™ delivers quality products at affordable pricing. Coming in a variety of designs ranging from clouds, to colorful blossoms, to a variety of trees, and hot air balloons, Skypanels™ bring the relaxation and

color of the outdoors, into a variety of interior settings including healthcare facilities, offices, conference rooms, retail spaces, spas, hotels, restaurants, homes and schools.

Skypanels™ can be ordered individually or as a set, creating a virtual sky. Installing Skypanels™ is easy and can be completed in minutes with minimal effort. Weighing 1.75 pounds and measuring 24" x 48", Skypanels™ can be cut with a razor blade to fit into any ceiling space. Made from 100% acrylic with the images screen printed directly onto the panels, Skypanels™ are built to last for up to 20 years under normal inside lighting conditions and for up to 10 years outdoors. Skypanels™ are created with a protective layer of UV coating.

Founded in 2004 USA Skypanels, Inc. is a strong supporter of local charities, donating a portion of its proceeds from every Skypanel™ purchased to worthy organizations. For more information about Skypanels™ products please contact USA Skypanels, Inc., 6180 Laurel Canyon Blvd., Suite 320, North Hollywood, CA 91606 USA.
